3.3 Solar Module

The Module shall offer a 25-year linear performance warranty for a minimum of 81% of the nominal power output of the module over the 25-year life cycle, as well as a 10-year product warranty. The PV panels shall be submitted to a stringent TUV Rheinland Power controlled inspection mark. The panels shall have a global quality standards certification in accordance with IEC-standards 61215 and IEC61730.

The photovoltaic energy conversion is optimized by highly efficient Monocrystalline solar module technology. The solar panels shall be ISO and TÜV certified and carry a 10-year product warranty. Hail-resistant and corrosion-proof. Rated outputs on the panels are 90% minimum for the first 10 years and 80% minimum after 25 years. Panel outputs are designed to cater for all annual environmental conditions.

TERMS OF REFERENCE TO SUPPLY AND INSTALLATION OF NEW APOLLO FLOOD LIGHTS AT AGRICULTURAL RESEARCH COUNCIL: ANIMAL PRODUCTION

Solar panels surfaces are called self-cleaning; it tends to mean that the surface is hydrophobic. Water droplets cannot stick to these surfaces. The spurned droplets then roll off, taking dust particles with them. In essence, these surfaces aren't exactly self-cleaning. Rather, they minimise the build-up of dirt and mineral residue that can block the sun from the panel. The importance of this should not be minimized. Dirty solar panel can have its power capabilities reduced by as much as 30 percent in high dust / pollen or desert areas.

3.4 Batteries

Lithium-ion based battery packs have the added advantage that they have a higher power density than lead, which means they have more available power for the same mass of a lead battery. The batteries shall be of the high-power density Lithium-ion based battery type with the longer life expectancy and higher rate of depth of discharge (DOD), and longer battery lifetime.

All Lithium-ion battery packs shall have an integrated Battery Management System (BMS) which monitors the health, charging and discharging of the battery pack insuring and safeguarding the cells so that they are not over charged or discharged, maximising their lifetime.

Battery pack operating temperature: -20°C to +60°C.

3.5 Charge Controller

The charge controller shall regulate the flow of current from the solar panel to the battery during daytime and from the battery to the luminaire at night-time. It shall prevent the battery from overcharging and deep discharging thus increasing system efficiency and expected lifespan. The charge controller shall act as a daylight switch by monitoring the voltage produced by the PV panel. When the voltage dips below a predetermined level it assumes that the sun has set and switches the luminaire on. When the voltage climbs above this threshold again, the charge controller assumes that the sun has risen and switches the luminaire off again. The charge controller shall

TERMS OF REFERENCE TO SUPPLY AND INSTALLATION OF NEW APOLLO FLOOD LIGHTS AT AGRICULTURAL RESEARCH COUNCIL: ANIMAL PRODUCTION

be equipped with an innovative maximum power point tracking technology, the charge controllers used offer maximum performance and yield from all types of solar systems.

4. Casting of Foundation for electrical and solar

- Adequately designed foundation bolts, made from mild steel, shall be provided with each mast together with templates
- Foundation Bolts per Plynth: 6 Xm36 Plate, 710mm PCD, UTS 550 MPA minimum fixing templates to be placed at top and bottom of bolts before casting.
- Positioning of stools to be determined on site to provide sufficient support between Top and Bottom bars.
- Bottom and Top reinforcement mats must each consist of 14 x 14 bars at 214mm spacing.

5. BACKGROUND

The ARC has administrative offices, farms and other critical infrastructure and facilities. Considering the above, ARC requires service providers who are certified in terms of new electrical installations to the ARC Sites.
